Ceramic Roller Bar For Roller Kiln

1,Process of Ceramic Roller Bar For Roller Kiln

The product is extruded and fired in a high temperature shaft kiln. The two ends of the product should be machined into transmission holes for easy use. High alumina ceramic roller can be divided into $Al_2O_3 \geq 70\%$, service temperature $1250^{\circ}C$ and $Al_2O_3 \geq 80\%$, service temperature $1400^{\circ}C$ according to different alumina content and service temperature.

2,Applications of Ceramic Roller Bar For Roller Kiln

Tile roller kiln, ceramic roller kiln, glass roller kiln, etc.

3,Product performance:

- 1) High flexural strength, round and straight
- 2) Good thermal shock resistance and without fracture.
- 3) High temperature resistance, abrasion resistance, many times of use

4, The product is cylindrical rod-shaped, and the opening at both ends or one end cooperates with the gear to effectively drive.

5, Products are packed in wooden cases
